

Freelance Developer

Belgium

I work as a freelance developer and develop Storefront Simulator in my free time. I am a calm and curious developer who enjoys learning new technologies and turning requirements into working software. I tend to understand the situation first, then take ownership when a problem needs action.

01

Current Work

April 2022 - Present

Ravago - Invoicing Application

Developer | Current freelance project

I contribute to an internal Ravago application used to create invoices for customers and legal entities across the group.
